React

React Introduction
I Javascript lib created by Facebook....
It is very fast, maybe faster than the pure javascript, because it creates virtual
DOM.

Important commands

```
npm install -g create-react-app
//npm install --global http-server
sudo npm install is okey...
sudo apt install nodejs
sudo apt install npm
npm --version / npm -v

// For creating react project
npx create-react-app test// test is the name of the folder for the project.
// To start run the project
npm run start

//For installing react bootstrap..
//You can try to use this

npm install bootstrap  react-boot
npm i --save react-bootstrap

// For API I do recommend
npm add axios

// Components

https://react-bootstrap.github.io/
https://react-bootstrap.netlify.app/components/images/
```
